This attempt took 13 minutes.

Question 1

1 / 1 pts

A good choice for a form field with lots of text would be a CharField.

- ☐ True
- ☒ False

Question 2

1 / 1 pts

The django admin interface: Is perfect for exposing data to external users.

- ☐ True
- ☒ False

Question 3

1 / 1 pts

To allow all fields from a Model to be displayed on a form.

- ☐ fields= ['all']
- ☐ model = 'all'
- ☐ model = '\_\_all\_\_'
- ☐ model = '\_all\_'

☒ fields = '\_\_all\_\_'

#### Question 4

1 / 1 pts

In order to populate a form with and existing data from a saved order you would need the following lines of code.

☐ order = Order.objects.all()

☒ order = Order.objects.get(pk=order\_id)

☐ order = Order()

☐ OrderForm(data=order)

☒ OrderForm(instance=order)

#### Question 5

1 / 1 pts

Which library is required to make the ImageField work correctly?

☐ Sheets

☐ Pills

☒ Pillow

☐ Images

#### Question 6

1 / 1 pts

What argument should be set when we pass request.POST into the ModelForm object?

☐ instance

☐ files

☐ prefix

☐ queryset

☒ data

#### PartialQuestion 7

1.33 / 2 pts

What is the inner class Meta used for?

☒ Changes how the model should behave.

- ☐ Changes how the form should behave.
- ☒ Specifying which fields should be displayed on the form.
- ☐ To link the model to the form.

IncorrectQuestion 8

0 / 1 pts

To update data in a model object we would use the Get method()

- ☒ True
- ☐ False

Question 9

1 / 1 pts

what mistake is in this code?

```
def get(self,request,contact_id=None):

    if contact_id:
        contact = Contact.objects.get(pk=contact_id)
    else:
        contact = Contact()

    ContactForm(instance=contact)

    return render(request = request,
                  template_name = 'customer_app/contact_edit.html',
                  context = {'contact':contact,'form':form})
```

- ☐ the form variable isn't passed to the context
- ☒ the form variable isn't instantiated.
- ☐ the contact object retrieval is missing the primary key
- ☐ there isn't anything wrong with this code.
